

#### **Get started**

To embed jQuery in your project, download source code from <a href="https://jquery.com/download/">https://jquery.com/download/</a> or include jQuery CDN in the head of html file.

# Selectors \$()

In addition to similar CSS selectors, jQuery selectors include:

- index selectors: :eq(index), :lt(index), :gt(index)
   \$("li:lt(3)") /\*Selects elements with index 0, 1, 2\*/
- content selectors: :contains(text), :has(selector), :empty, :parent
   \$("p:contains(hello)") /\*Selects elements that contain text "hello"\*/
   \$("p:has(button)") /\*Selects all elements that contain <button>\*/
- form selectors type(:button, :file, :input, etc)/status(:selected, :checked, :disabled, :enabled, :focus)
   \$(":button") /\*Select all <button> elements and elements of type button\*/

# Traversing \$(selector).method([param])

In addition to methods shown in slides, jQuery traversal methods include:

- Ancestors
  - closest(selector [, context])
     \$("div#selected").closest("div") /\*The closest <div> ancestor (including itself) of <div> element with id "selected".\*/
  - o .offsetParent()\$("p").offsetParent() /\*The closest ancestor of elements that have a position attribute\*/
- Filtering
  - o .not(selector)
    \$("p").not(".test") /\*All elements that do not have a class "test"\*/
  - o .slice(start\_index [, end\_index])
    \$("li").slice(0, 3) /\*The first three elements\*/
- .add(selector [, context])\$("p").add("button") /\*All and <button> elements\*/

### **CSS/HTML Manipulation**

#### Structure Manipulation

Get	Update	Add	Remove
.text()	.text(new_text)	.append(content)	.remove(filter)
.html()	.html(new_html)	.prepend(content)	.detach(filter)
.val()	.val(new_val)	.after(content)	.empty()
.attr(attr_name)	.attr(attr_name, new_value)	.before(content)	.removeAttr(attr_name)
		.wrap(wrapper)	.unwrap()

**Style Manipulation** 

Class	Style	Dimension (get or set)
.hasClass(class_name)	.css(property_name)	.width() .height(400)
.addClass(class_names) .addClass("first second")	.css(property_name, value)	.innerWidth() .innerHeight()
.removeClass(class_names)	.css(property_object) .css({backgroundColor:"red", })	.outerWidth() .outerHeight()
.toggleClass(class_names)		.outerWidth(true) .outerHeight(true)

### **Event & Animation**

- jQ Event
  - o Properties: .target / .pageX / .pageY / .which
  - Create an Event
    - var e = \$.Event("click"); //Same as jQuery.Event("click")
    - var e = \$.Event("keydown", {keyCode: 64})
  - Trigger an Event: \$("body").trigger(e);
  - Add/Remove Listener
    - \$("selector").eventName(function);
    - \$("selector").on("eventName", function);
    - \$("selector").off(["eventName", handler]);
    - eventName example: click, keypress, mouseenter
- Effect and Animation
  - o Effect
    - e.g. \$("selector").fadeIn([speed, callback]);
    - Toggle: If element currently shown, execute the effect to hide element; vise-versa
    - effect list: show/hide, fadeIn/fadeOut/fadeToggle/fadeTo, slideDown/slideUp/slideToggle
  - Animation
    - \$("selector").animate({CSSparameters} [, speed, callback]);
    - Stop Animation: \$("selector").stop([stopAll, goToEnd]);

#### **AJAX**

Helper	Core	
\$.get(url [,payload, success, dataType])	<pre>\$.ajax({   url: "server/location" })</pre>	
\$.post(url [,payload, success, dataType])	<pre>\$.ajax().done(function(data){ }) \$.ajax().fail(function(xhr, status, error){ }) \$.ajax().always(function(xhr, status){ })</pre>	
\$(selector).load(url [, payload, success])
